DETAILED ACTION

Response to Amendment

1. This Office action is in response to the Amendment filed 08/05/2009. Claims 8-11 and 13-16 are pending in this application.

Response to Arguments

2. Applicant's arguments, see Remarks (pages 5-9), filed 06/11/2009, with respect to the rejection of claims 8-16 have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In claim 8, line 3, the phrase "selected from the group of" is replaced with the phrase "selected from the group consisting of".

In claim 8, line 12, the term "500nm" is replaced by "500 nm".

In claim 8, line 18, a comma is inserted after "dicarboxylates".

Allowable Subject Matter

4. Claims 8-11 and 13-16 are allowed.
5. The following is an examiner's statement of reasons for allowance: The present claims are allowable over the closest prior art of record: Idemura et al. (US 6,063,862).

The independent claim 8 recites a method of making a composite having a high content of inorganic particles dispersed in a polymer matrix, said method comprises forming a polyamide, polyurethane or polyurea in the presence of a metal compound such that inorganic particles of metal oxides, metal hydroxides or metal carbonates are formed from the metal compound during the formation of the polymer (i.e., the polymerization and the sol-gel process are carried out complementarily). The metal is selected from transition metal elements and Al, Ga, Ge, In, Sn, Sb, Pb and Bi.

Idemura et al. teaches a similar method. However, the reference only teaches silicon oxide particles. Further, in the Remarks filed 06/11/2009, the applicants have provided convincing evidence showing that the sol-gel reaction rate of Si is different from that of the claimed metal elements. That is, it is not obvious to one skilled in the art to apply the Idemura's method, which involves a sol-gel process of forming SiO₂ particles, to the claimed method, which does not involve silicon. Due to the different reaction rates, expectation of success is low for such modification. The claimed method therefore entails important criticality and unexpected results.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1796

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
